Definitions

HCF: The greatest number in the group of common factors of two or more numbers is known as the highest common factor, usually written as HCF.
e.g. HCF of 56, 140 and 63 is 7.

LCM: The least number in the group of common multiples of two or more numbers is the lowest common multiple usually written as LCM. e.g. LCM of 12, 18, 36 and 72 is 72.

Fraction: A numerical quantity that is not a whole number (e.g. 1/ 2, 0.5).

Proper Fraction: A fraction where the numerator (the top number) is less than the denominator (the bottom number). e.g. 1/ 4(one quarter) and 5/ 6(five sixths) are proper fractions.

Improper Fraction: A fraction where the numerator (the top number) is greater than or equal to the denominator (the bottom number). e.g. 5/ 3(five thirds) and 9/ 8(nine eights) are improper fractions.
